

Year 5 Blog - Week commencing 29th January 2024

Ambitious astronauts!

English

Year 5 have had a fantastic week learning more about life on the International Space Station, what skills are required to become an astronaut and all about the new Artemis program in which NASA have launched. We have watched detailed video clips of astronauts on the ISS and researched information on NASA websites. With all of this information, pupils have begun to write their persuasive leaflets; to become an astronaut for NASA. They have all worked tremendously hard and we are very excited to see their published work next week for all to see!

Maths

Pupils have been learning to multiply non-unit fractions and mixed numbers by an integer, within both fluency and reasoning questions. They have all worked well using their previous knowledge of fractions to solve these problems.

Science

This week, we learned all about the Earth's revolution and its rotation on its axis and how this affects the hours of daylight in London across the year. Pupils created an accurate bar graph to show this in their science books.

We also began the 'My Future Project' program this week; learning about the skills required for different careers. It also made us think of skills we gain outside of academia.
