

## Year 5 Blog - Week commencing 20.11.2023

### Super scientists!

Year 5 have been learning about chemical reactions causing irreversible changes. This week, we did an experiment involving bicarbonate of soda and white vinegar. The combination of the two created a gas, carbon dioxide, which inflated the balloon!

We have also started our new writing unit learning the Ancient Greek myth, Theseus and the Minotaur. We used 'hot seating' (a drama technique) to explore the characters feelings and motives. In maths, we have had a great start to our learning of finding equivalent fractions and comparing fractions by identifying the common denominator. A fantastic week had by all!
