

Year 4 Blog – Week Commencing 25.09.2023: Cracking Contraptions

This week we have started our new writing topic. We are now going to be writing to inform! We have had a letter from Wallace and Gromit saying all their invention blueprints have been stolen. It is our job to explain how one of their 'cracking contraptions' works so they can rebuild it for the invention fair!

We are writing about the Snoozatron invention! This week we have created our blueprint plans so that we are ready to start writing next week!

In history lessons we learnt all about the incredible invention of roads. Did you know we can thank the Romans for this life changing invention?! During our lesson we learnt how roads were made and why the Romans decided to come up with this idea.

In our science lesson this week we have the boomwackers back out to help us investigate volume. We learnt that the more energy a vibration has, the higher the soundwave vibrates and the louder the sound becomes. We found that to make a sound on the boomwackers become louder, we had to hit the instrument with more force. To make a quieter sound, we had to tap the instrument with less force.
