

Year 4 Blog – Week Commencing 18.09.2023: Super Sound!

This week in year 4 we were investigating how pitch can be changed in our science lessons. First, we learnt about what pitch was and how pitch changes. We identified that if the vibrations were quicker, the pitch would be higher and if the vibrations were slower, the pitch would be lower.

We then experimented with various instruments to identify whether they made a high or low pitch.

In writing we finally finished our Stone Age stories! We worked so hard on these and have included lots of fronted adverbials and expanded noun phrases. We worked on including speech in our problem paragraph and make sure that we punctuated it correctly. Some of us even managed to include some similes!

We got to top copy parts of our writing so it can be displayed across our classroom and around year 4!

In DT this week we planned our designs for our car prototypes. We thought about appropriate materials to use during our build. We will be using wood and card because they are strong. We also need to use saws to cut the wood. We drew out the design for the outside of our cars, making sure they look eye catching and unique!
