

Year 4 Blog – Week Commencing 12.06.2023: House Building - The Indus Valley Way of Life!

This week in Year 4, we have been extending our learning about the Indus Valley in History, acting out Christian parables and exploring different states of matter.

In history, we learned about the Indus Valley way of life. We researched how they built their houses and brought water to their homes. We learned that they had a very modern way of life and was able to draw water from wells. Some houses that had been discovered even had multiple levels and rooms.

In science, we made use of the beautiful weather and explores states of matter outside. We drew a table and identified all of the different solids, liquids and gasses we would see. We then learned about how the particles make the matter different.

We started our design and technology double page spreads this week and we are excited to start cooking our chicken tikka masala in two weeks' time!
