

Year 6 Blog - Week commencing 25.09.23: Data Transfer Experiments!

Year 6 have had assessment week this week, where children have sat their first practice papers for their tests next May. The experience they have gained this week will help them to settle into the routine and have a good idea of what to expect in May. We have seen a tremendous effort and dedication this week along with great resilience to complete these practice papers and allow their teachers to know how best to support them academically this year. A big well done to Year 6 for completing this week.

In PE this week the children have been carrying on with either Fitness, Gymnastics or Football and we have seen great progress throughout this term. Everyone has been participating and challenging themselves this week and working together as a team.

In computing this week, the children had an exciting task of delivering information in multiple packets across the playground to represent how data is transferred by computers across the internet. The children collaborated efficiently and successfully to transfer the messages/pictures across identifying both the header and the data payload to ensure they have the complete message!

We have been really impressed with the whole of Year 6 this week and feel they deserve a lovely rest this weekend!
